

# АК - Лабораторная работа 3

Ivan Pazhitnykh

December 2016

## 1 Условие

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = f(x, y) \quad (1)$$

$$\begin{cases} u(0, y) = f_1(y) = y^2 \\ u(a, y) = f_2(y) = \sin(y) \\ u(x, 0) = f_3(x) = x^3 \\ u(x, b) = f_4(x) = x^4 \end{cases}$$

## 2 Запуск

```
bash run.sh {num_of_procces} {rows} {cols}
```

## 3 Решение Wolfram

```
In[7]:= solution2 = NDSolveValue[{D[u[t], x] + D[u[t], y] == t*x, u[t, 0] == t^3, u[0, x] == x^2, u[0, y] == Sin[x]}, u, {t, 0, 1}, {x, 0, 1}];
```

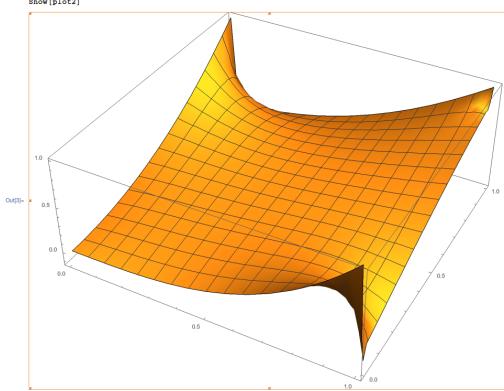

Рис. 1: График решения ДУ Пуассона (1)

## 4 Результаты

```
(bsu)MacBook-Pro-Ivan:lab3py Drapegnik$ bash run.sh 1 3 3
